A lone individual's brave act of political resistance against the Nazis.

In 1939, eight weeks after Nazi Germany invaded Poland, two letters arrived at the British embassy in Oslo. Penned by an anonymous sender, the letters described new German weapons systems and outlined the aims of the Wehrmacht's military research programmes. The British secret service feared targeted deception, but a young secret service officer recognised the information as largely accurate and realised it could be used to the advantage of the allies. But who wrote the "Oslo Report"? Hans Ferdinand Mayer, the author of the documents, remains largely unknown to this day. He risked everything and only narrowly escaped death in a concentration camp. In this book, David Rennert traces the astonishing story of the Oslo Report.

DAVID RENNERT

Born in 1984, Rennert studied political sciences at the University of Vienna and is a science editor at the Austrian daily broadsheet "Der Standard". In collaboration with Tanja Traxler, he co-authored "Lise Meitner – Pionierin des Atomzeitalters", which was named 2019 scientific book of the year (natural sciences category). Most recently published by Residenz Verlag: "Der Oslo Report" (2021).
